EXPERIMENT 9: AI AND ANALYTICS USING ZIA

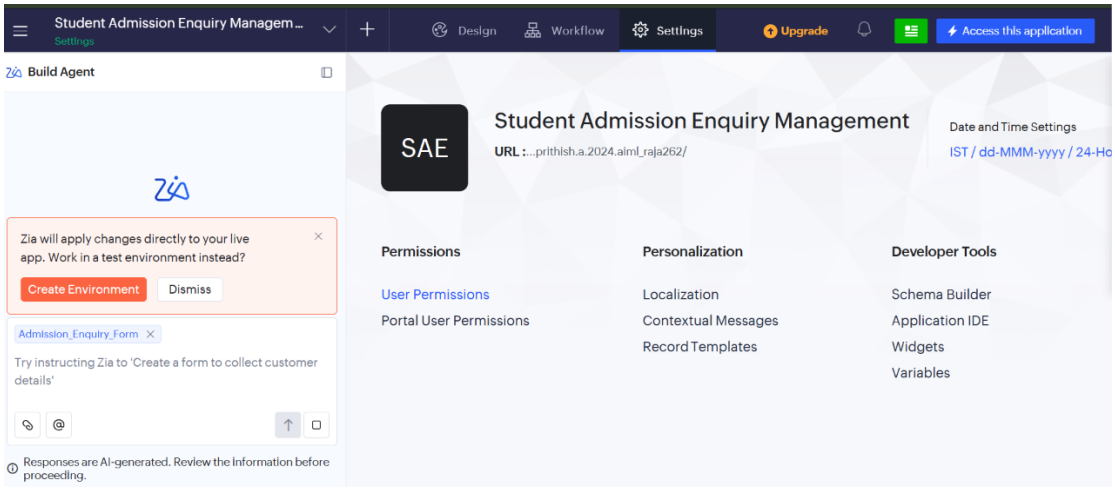

Aim

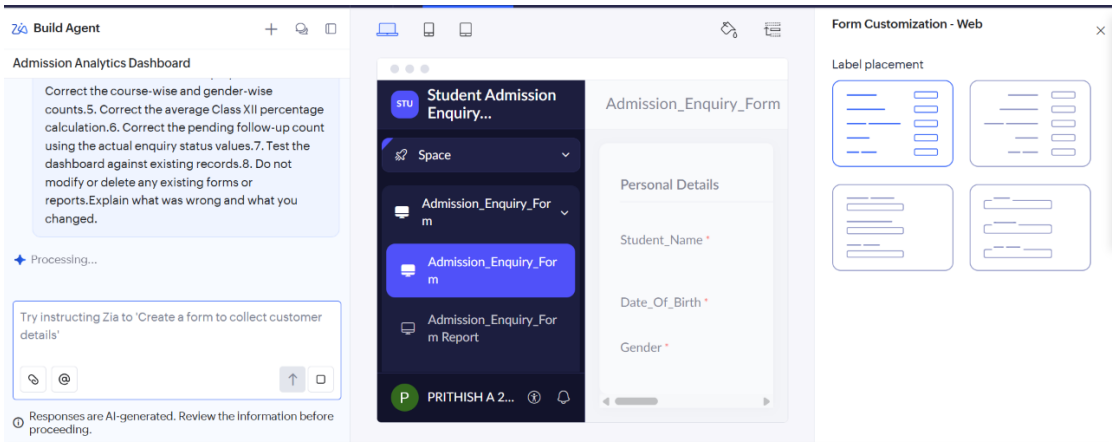

To develop an admission analytics dashboard using Zia in Zoho Creator to analyze student admission enquiries, visualize course-wise and gender-wise distributions, calculate average Class XII percentages, and identify pending enquiries requiring follow-up.

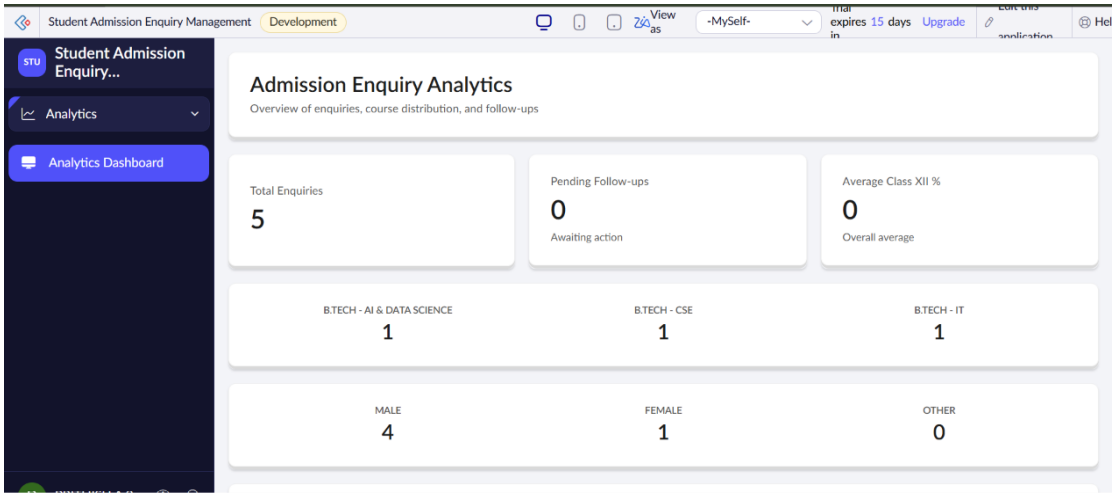

Procedure

1. Log in to Zoho Creator and open the existing **Student Admission Enquiry Management** application.
2. Open the application editor and navigate to **Settings**.
3. Open the **Zia Build Agent** to access AI-assisted application development.
4. Provide a prompt requesting an admission analytics dashboard using the existing Admission_Enquiry_Form.
5. Ask Zia to create a dashboard containing the total number of enquiries, course distribution, gender distribution, average Class XII percentage, enquiry status distribution, and pending follow-up list.
6. Review the proposed changes and instruct Zia to create the dashboard without modifying existing forms or reports.
7. Open the newly created **Admission Analytics Dashboard** from the application menu.
8. Verify the dashboard components and check whether they display the actual admission enquiry data.
9. If the dashboard displays zero values despite existing records, use Zia to troubleshoot the data source, field link names, and calculation logic.
10. Refresh the dashboard and verify the displayed results against the admission enquiry report.
11. Capture screenshots of the Zia Build Agent and the dashboard for documentation.

Result

Thus, an admission analytics dashboard was created using Zia in Zoho Creator to visualize student admission enquiry data. The dashboard was designed to display total enquiries, course-wise and gender-wise distributions, average Class XII percentage, and pending follow-ups.

Note: If the dashboard continues to display zero values, the data connection must be corrected and tested before confirming that the analytics are functioning correctly.
